CLASSROOM BASED TRAINING

Classroom based training is designed to provide clients the opportunity to receive certificate's in transport and logistics/civil construction in an interactive and professional, classroom training environment. Prior to the licensing +/- ticketing component of the relevant training package.

GROUP BASED TRAINING

Group Based training is a period of time purchased to cover your training and assessment needs. The training period is shared with other members of the general public, which assists in observational training methods.

Your training period is determined by the vehicle/equipment type. Practical and theoretical training is delivered during the course with formal assessments conducted at the end of the course.

TRAINEESHIPS

Traineeships allow your organisation to train new or existing employees under a structured training program. They will receive a nationally accredited qualification by undertaking formal training in Warehousing and Transport Logistics and/or Civil Construction. Government incentives may be available to the Employer if the trainee/employee eligible.
